

We're Hiring |

Head of R&D France

Main responsibility

- Build the R&D team in France – position IRP R&D site in France as a center of excellence and innovation
- Lead R&D activities in France to leverage IRP Systems capabilities and knowledge
- Establish automotive engineering capabilities mainly related to industrialization, certification and platform integration, to complement IRP's core technology
- Manage research activities with ecosystem partners – semiconductor companies, automotive OEMs and T1s, research institutes and laboratories
- Manage co-development projects with automotive EU customers
- Manage government-funded research programs in France / EU
- Manage the administrative activities related to the French office
- Effectively partner and collaborate with the IRP Systems headquarter R&D and management team

Qualifications and skills:

- Passion for deep-technologies and for technological revolutions
- Passion for sustainability and climate protection
- Creativity, long-term thinking and problem-solving abilities
- MSc / PhD in Electrical Engineering / Computer Science
- 10+ years' experience in hands-on advanced engineering position in the automotive, aerospace or energy industry
- 5+ years' experience managing multidisciplinary engineering / research teams
- Demonstrated ability to lead, mentor, and coach teams and individuals
- Decision-making skills, conflict resolution, and follow through
- Proven ability to lead and organize multi-disciplinary teams, projects and initiatives in a fast-paced and deadline-oriented business environment with broad impact.
- Fluent English, both written and verbal.
