The FISITA World Automotive Summit is a unique and exclusive annual meeting of the world’s automotive technical leaders.

The 8th FISITA World Automotive Summit brings together visionary leaders from industry, government and research to discuss key developments, issues and opportunities generated from this year’s theme: “Clearing the air; creating a path to sustainable mobility”.

Regulation has become a critical and increasingly volatile topic with acute importance to society and the automotive mobility sector. Much of the discussion is driven by public perception. Facts, including the impact on the customer and the underlying physics, have been demoted to secondary considerations.

FISITA, as a global membership society linking the automotive industry, engineering societies and academia has a critical, central role in supporting progressive discussions based on facts.

The 2017 FISITA World Automotive Summit provides a platform to discuss this topic of international importance in a relevant way by providing true cross-discipline starting points for thought-provoking discussion with a unique peer group, in a pre-competitive membership environment only FISITA can provide.

Key topics for this year’s agenda include:

- Economical and environmental impact
- Regulatory activities and global regulations
- Building an industrial strategy for sustainable mobility

Having an open-minded exchange on the significant regulatory changes, variances and challenges the automotive and mobility systems industry has to face is critical.

Geneva, Switzerland offers an ideal setting for a culturally neutral and open-minded, but provocative dialogue on the topic. With this we’re delighted to invite you to the 8th FISITA World Automotive Summit.

Participation is strictly limited and attendance is by invitation only.
