

Promoting excellence in mobility engineering

FISITA is the international membership organisation for the automotive engineering community.

Its purpose is to support and encourage the world's engineers to achieve their goals and create solutions which continually push the boundaries of technology and improve our society, especially where they relate to mobility, safety and the environment.

To fulfil regulatory requirements and meet customer expectations, FISITA advocates that all new technologies be developed using honest and transparent processes that ensure the integrity and dependability of the end products being used by millions of customers around the world.

Engineers create solutions; FISITA will continue to support them to do so.
